# Homework Progress

Submit M1  
until 23:59:59  
on 23.10.2023

Submit M2  
until 23:59:59  
on 30.10.2023

# **Previous Module (M1)**

## **Quick overview**

# Table of Contents

1. Containerization and Orchestration
2. Kubernetes Architecture and API
3. Basic Tools
4. Basic Objects

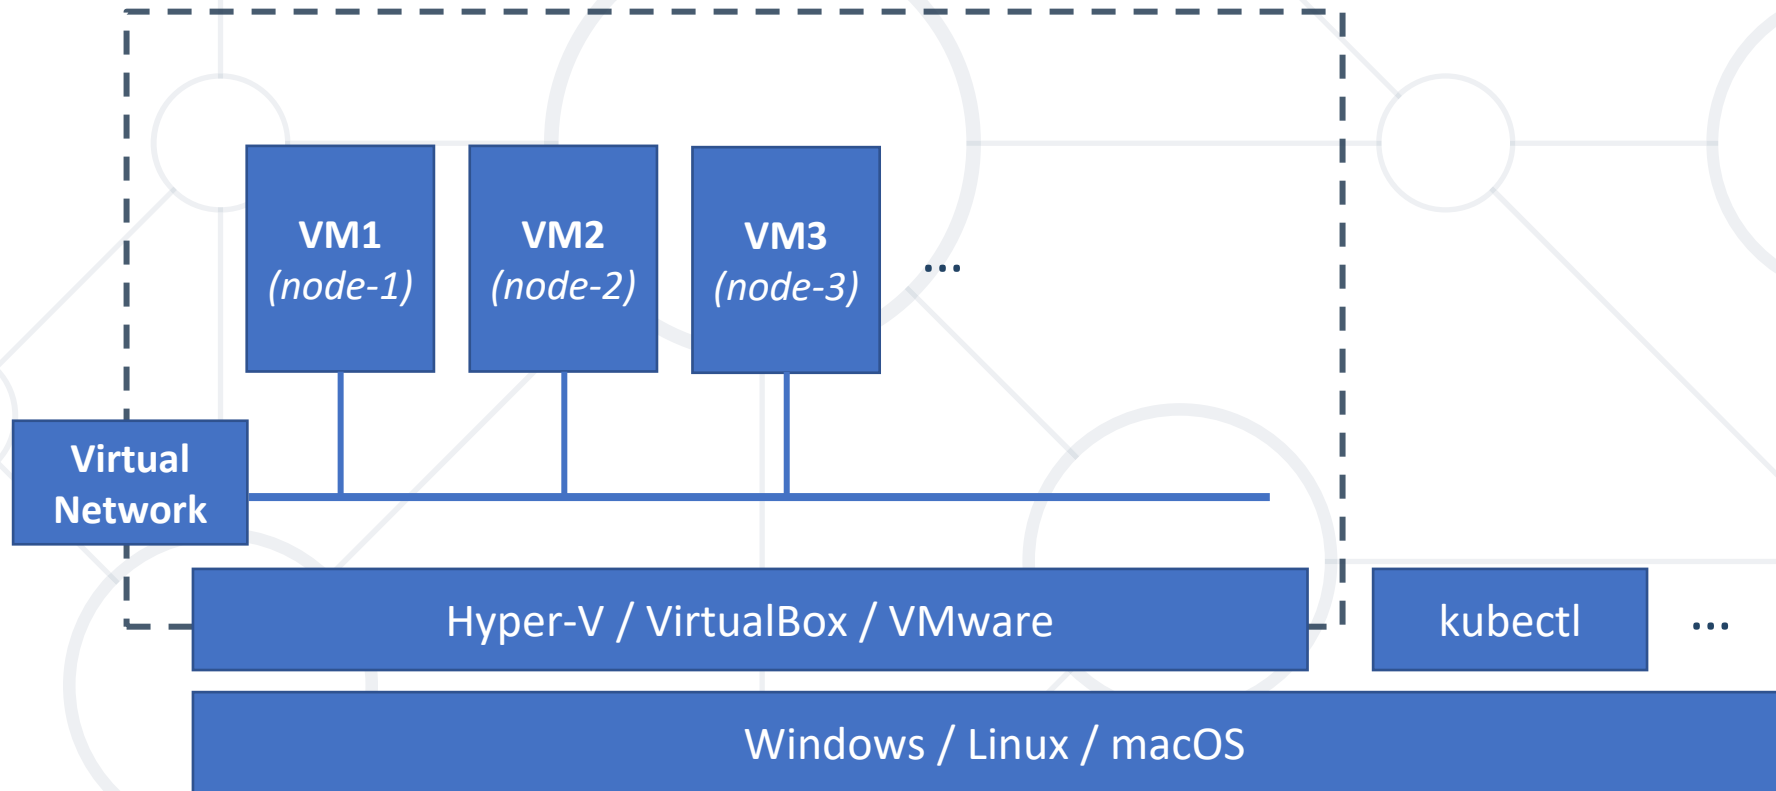

**This Module (M2)**

1. Basic Cluster Installation
2. Manage and Upgrade Kubernetes Cluster
3. Highly-available Kubernetes Cluster

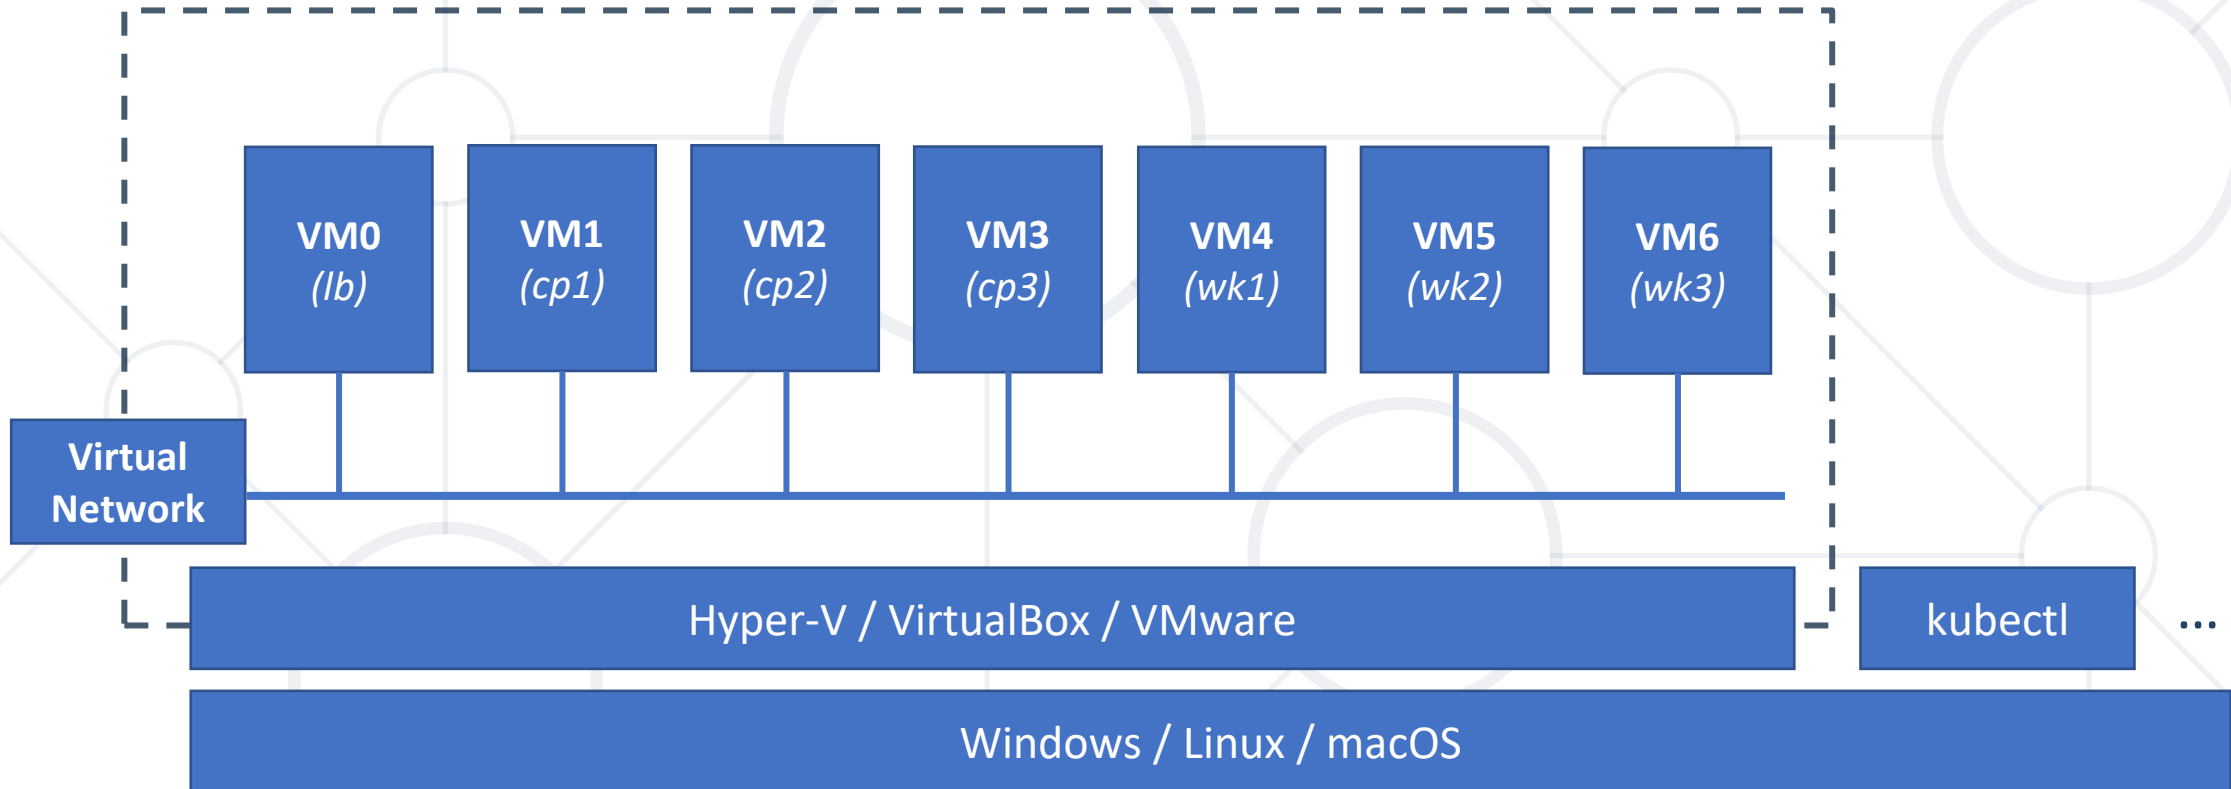

# Lab Infrastructure (part 1 & 2)

# Lab Infrastructure (part 3)

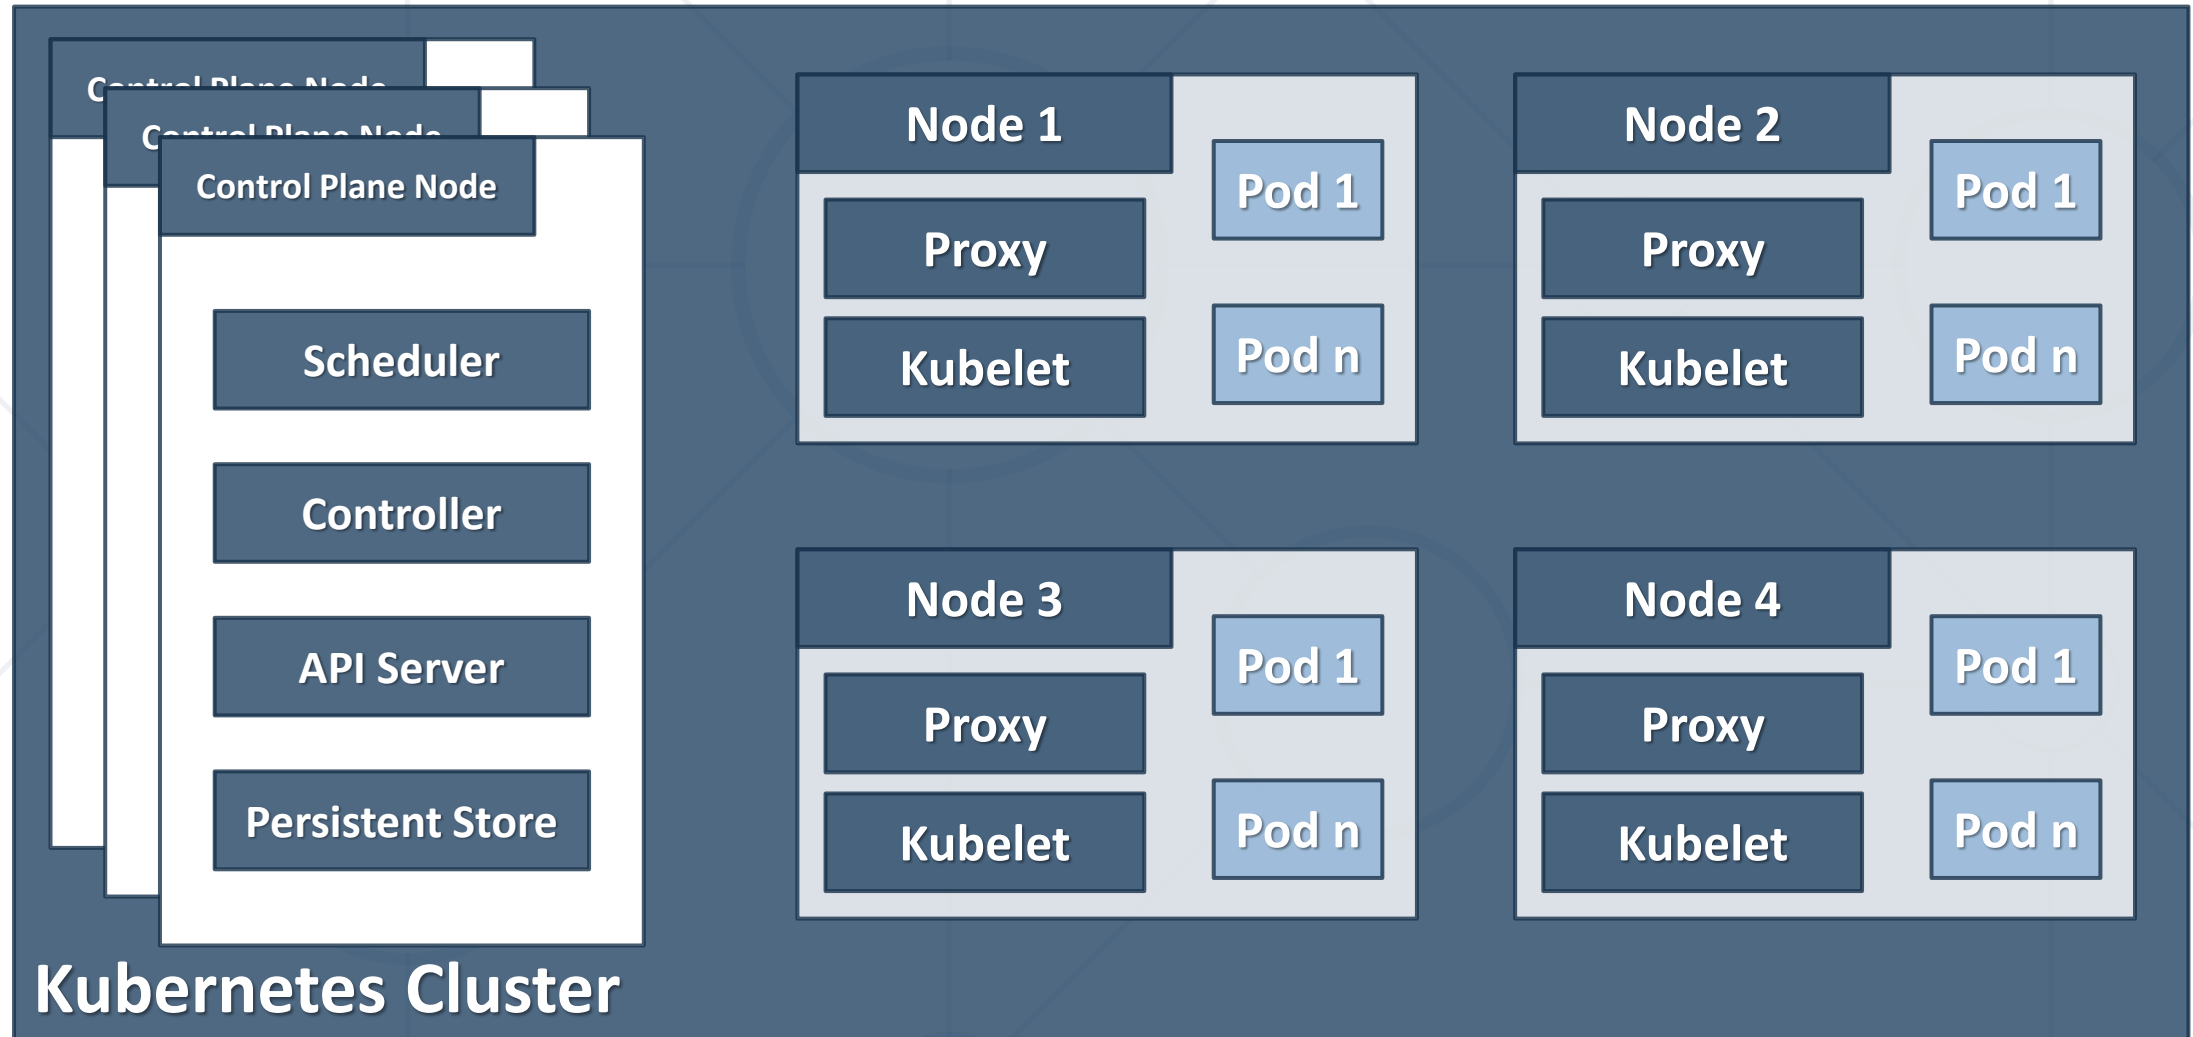

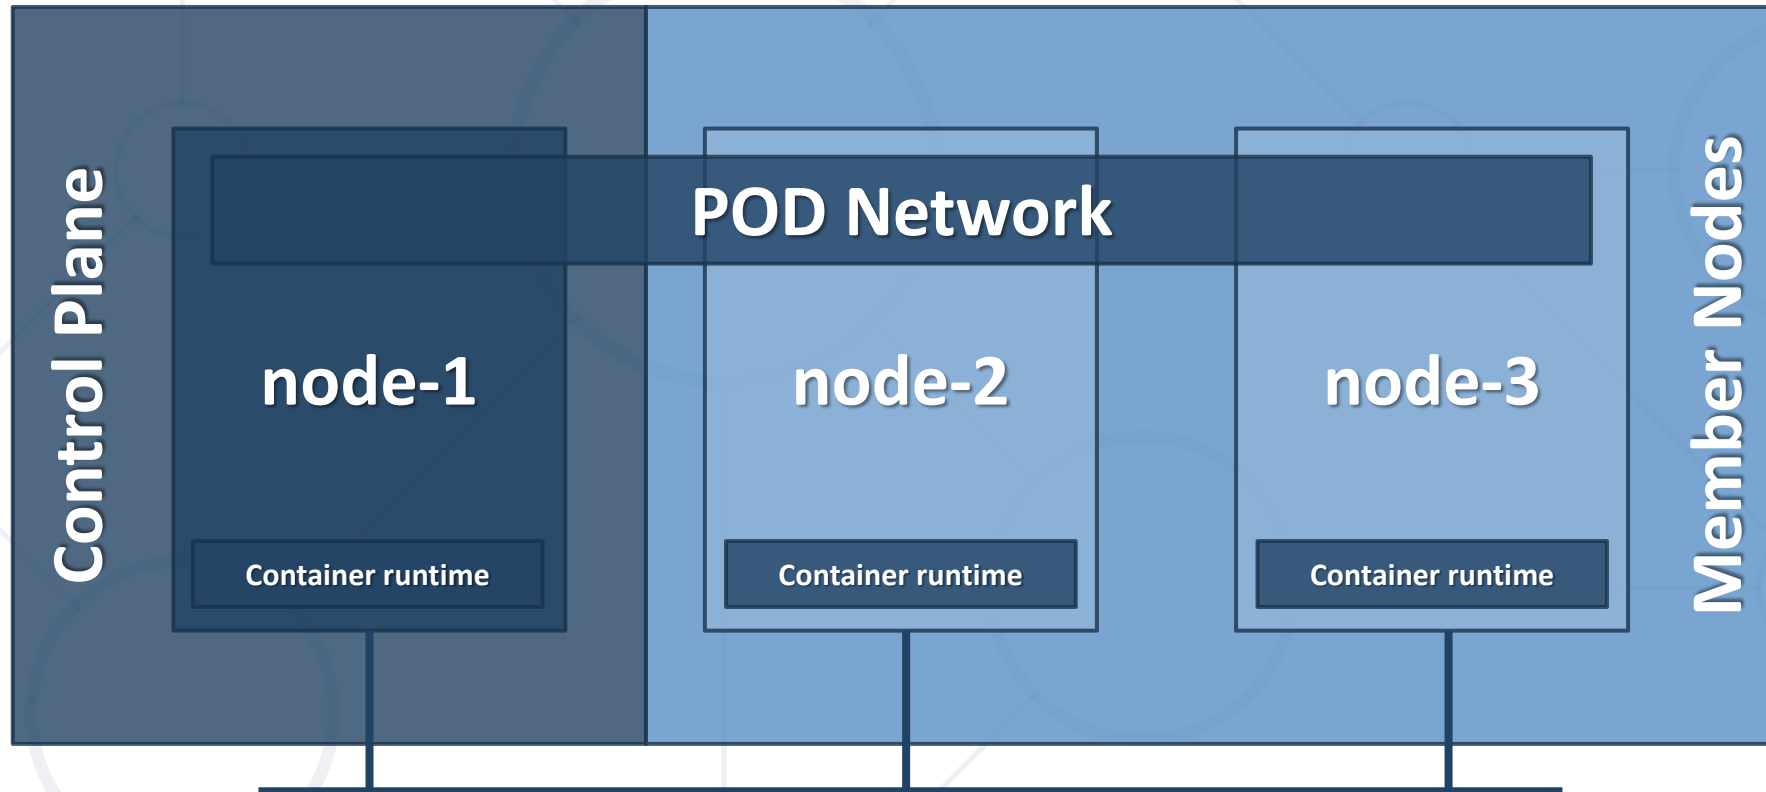

# Basic Cluster Installation

The semi-hard way

# Architecture Overview \*

# What Will We Install? \*

\* + other components that will be installed both explicitly and implicitly

# How Will We Do It?

- Prepare a golden image
- Create the infrastructure
- Initialize the Control Plane
- Join the other nodes
- Work with our new cluster

# Practice

Live Exercise in Class (Lab)

**Manage and Upgrade k8s Cluster**

- Make the node unavailable for new work (**cordons**)
- Initiate workload migration (**drain**)
- All pods are **evicted** and recreated on other nodes
- Node is ready for maintenance
- Declare the node ready for accepting work (**uncordon**)

# Cluster State Backup/Restore

- **etcd** is the default database for storing the cluster state
- It runs on the control plane node(s)
- Use the **etcdctl** command to control it

- Control plane nodes (one by one)
  - Upgrade kubeadm
  - Upgrade the node
  - Drain the node
  - Upgrade the other components
  - Uncordon the node
- Nodes (one by one)
  - Same approach as with the control plane nodes

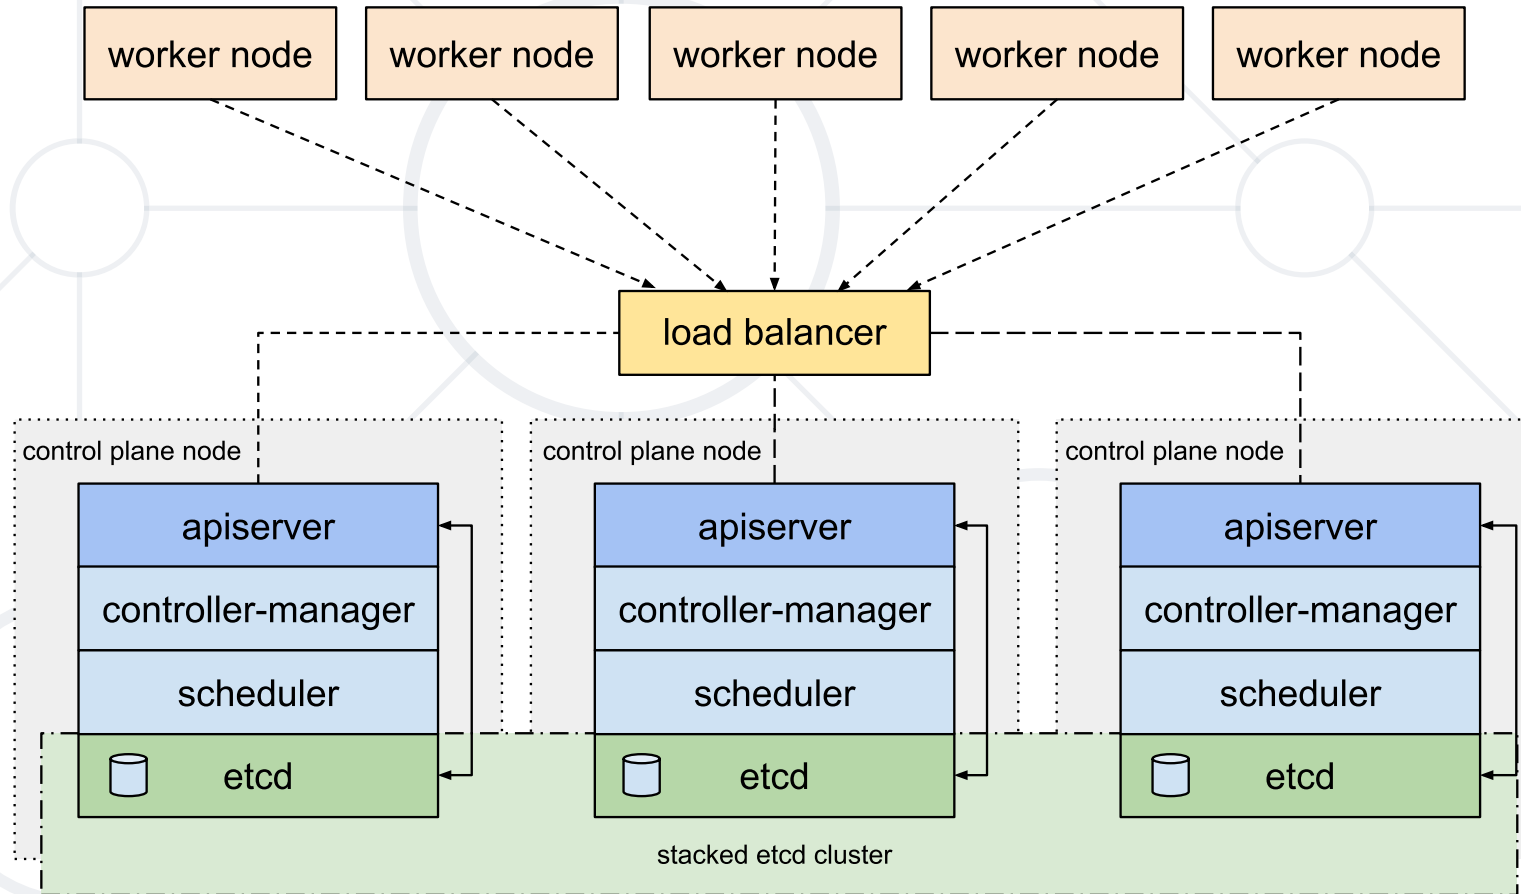

# Practice

Live Exercise in Class (Lab)

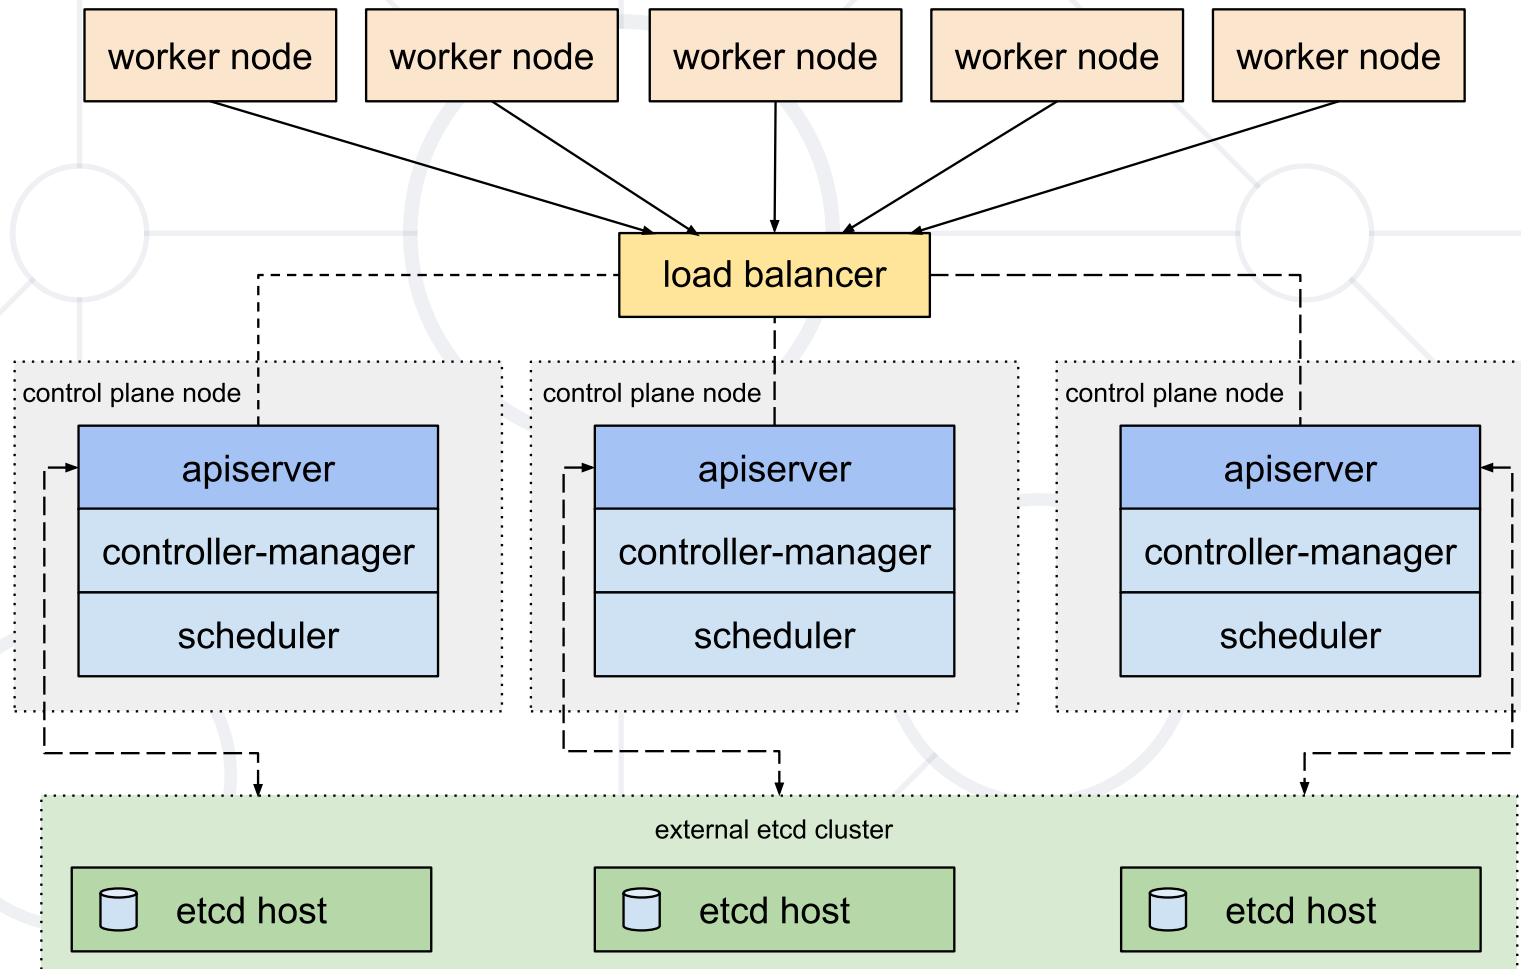

**Highly-available k8s Cluster**

# Option 1 (stacked etcd)

# Option 2 (external etcd)

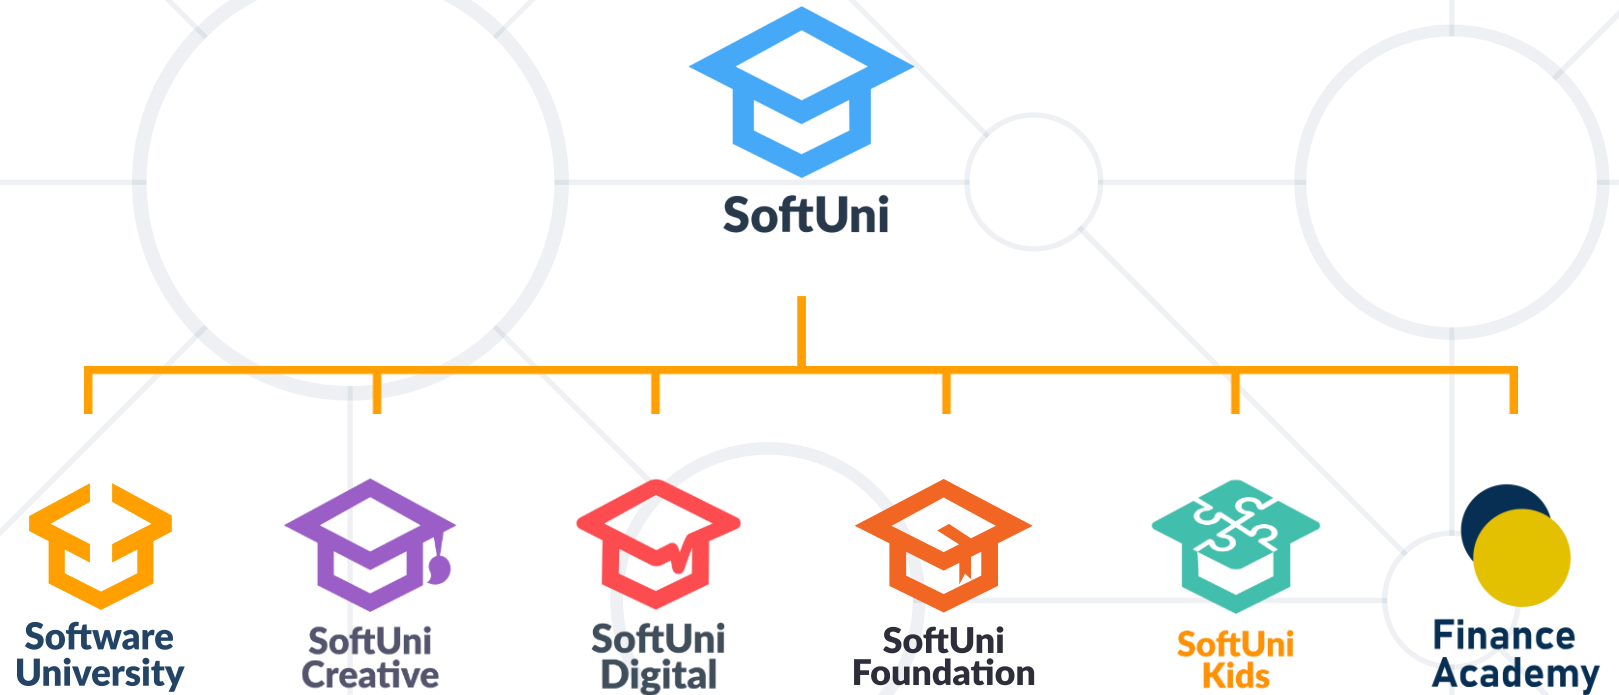

# Practice

Live Exercise in Class (Lab)
